

## WHY SHOULD YOUR COMPANY PARTICIPATE?

The model of dual education is a model of success. 95% of the apprentices get employed in the companies after passing the vocational training. The apprentices have already done practical courses in the companies, so they know best about structure and requirements. The companies save time and money because the skilled workers are already integrated.

## MECHATRONIC

Mechatronics are highly skilled workers in the manufacturing industry.

The special field is a combination of mechanical know how and electronic engineering.

## INDUSTRIAL MECHANIC

An industrial mechanic can work handcraft products and also work with conventional machines and CNC Machine. The industrial mechanic is especially educated in the pressing technique.

- Location: Taicang, Jiangsu Province, China
- Course Duration: 3 years
- Trainees: 70 Mechatronics trainees and 30 industrial mechanics trainees per year
- Ratio of practice to theory: 2:1
- Level: Skilled worker (Facharbeiter), certified by AHK Shanghai

## QUALIFIED LABOR FORCE

Over the past ten years, many German production companies have set up facilities in the Yangtze Delta Region. A major bottleneck for German companies' growth in China is a shortage of qualified labor force, including mechatronic technicians and industrial mechanics.

## AHK-CHIEN SHIUNG VOCATIONAL TRAINING CENTER

To counteract this challenge, the Delegation of German Industry & Commerce in China-Shanghai (AHK Shanghai) established the AHK-Chien Shiung Vocational Training Centre in September 2007 in cooperation with the Chien Shiung Institute of Technology. The Vocational Training Center aims to educate skilled workers (Facharbeiter) according to Germany's dual vocational system in the fields of Mechatronics and Industrial Mechanics.

## Board Members:

- Mr. Wang (Chairman, Deputy Mayor Taicang)
- Mr. Noether (Vice Chairman, AHK Shanghai)
- Mr. Wei (Chien Shiung Institute)
- Ms. Schoen-Behanzin (Wittur Elevator Co.,Ltd.)
